

WARNING MAY SERIOUSLY IMPROVE YOUR IMAGE

PRESS ON VENEERS NEW REMOVABLE DENTAL VENEER

Brighter Image Lab is helping people achieve the beautiful smile they've been looking for at a fraction of the cost. In a recent poll, almost **3/4 (74%)** of respondents agreed that an unattractive smile can hurt a person's chances for success in their career. Even more, **96%** believe that an attractive smile makes a person more appealing to the opposite sex. And, an incredible **99.7%** said that a person's smile is an important social asset.

When asked what they considered unattractive in a smile they listed: **Discolored, Yellow, or Stained Teeth, Missing Teeth, Crooked Teeth, Decaying Teeth & Cavities, Gaps & Spaces in Teeth and finally Dirty Teeth.** And while teeth whitening is the #1 most requested cosmetic dental procedure, it's the least performed. It's obvious that people are looking for ways to improve their image by improving their smile, but the cost of the dentist makes most options unrealistic for many.

Brighter Image Lab offers solutions to these common problems, with the **Press On Veneer.** A new, removable dental veneer, that is custom designed to fit over your existing teeth. There are **no adhesives, no alterations to your teeth,** and most impressively, **not a single dentist visit.**

"We're changing people's lives by changing their smiles. A better, brighter, straighter smile is the key to improving someone's image, and that's exactly what we can do with our Press On Veneer. Because of new updates to our design and production process, our veneers are fitting better, they're going out faster, and we're getting more response than ever before, from clients who are thrilled with their new smile."
